

Help wanted for a hearing study

We need volunteers with **normal hearing (aged 18-35)** or **mild/moderate hearing loss (aged 45-70)** to help with one of our research projects. The project aims to compare an extended-wear (in-ear) hearing aid with more conventional (daily-wear) hearing aids.

Taking part in the project would involve **one visit** to the University of Manchester Centre for Audiology and Deafness for an assessment. This is expected to take approximately **2 hours**.

No high sound levels will be used, you do not need to have a hearing aid already in order to take part, and you will not need to wear one during any of the research activities.

If you would be interested in taking part, or would like more information about the research project, please contact:

Melanie Lough (Research Audiologist)
