

Digital community pharmacy services

The University of Manchester is looking for people over 50 years of age across Greater Manchester to share their opinions and experiences towards the implementation of digital pharmacy services (such as telepharmacy, use of apps for disease management, etc). It will involve attending an in person focus group lasting no longer than 90 minutes at a convenient location. Refreshments will be provided, and a shopping voucher that includes a contribution towards travel expenses will be offered to everyone who takes part.
